Subject: Proposed Building in Hillview

Dear Alex : I write to you concerning the proposed construction of 45 houses to be built on a lovely piece of land in Hillview Avenue (Site Ref: H-BU 12) which is used by many people such as dog walkers, walking club groups, cyclists and children who can play safely around that area without the fear of more traffic accessing this estate. Although ,not being a greenfield site, its natural habitat would be completely destroyed for the wildlife that exists in this enjoyable part of Broxburn. Residents in Hillview have had flood problems before possibly due to the

undermining that took place during the Shale mining industry days. I believe there is an underground stream that runs down thru' the Hillview estate, if this was disturbed what consequences would arise from this action. One resident told us of the refusal of her Bank to give her building insurance because of the danger of subsidence in the area, this can be seen in the land to the right past the arches heading east. I wonder if there has been a geological study done to alleviate the concerns of the people of Hillview of the problems that could occur. I'm sure there are other available sites to build on without destroying a country style piece of land enjoyed by so many. Poor parking facilities, access, drainage, and waste disposal seem more appropriate to spend money on in this area.

Allan McIntyre.
