**Subject:** local plan consultation response

Hi

Attached questionnaire response, but just in case its blank, my main issues are:

- current and likely future public sector budgets mean that the level of infrastructure required is unlikely to be possible (developer contributions and NPD/PPP arrangements will not compensate for this)
- needs more emphasis on walking and cycling – so road safety including consideration of extra road traffic created by new developments
- the specific proposal EO1-0040, from Alan Graham is ‘not preferred’. I hope this means it won’t be included in the plan. There is no adequate infrastructure in the immediate area (existing houses are on septic tank, no mains gas, narrow bridge, narrow road, electricity supply would be difficult to expand), also threat to existing Central Scotland Forest Trust land, – it is a narrow piece of land which only works because it is surrounded by rural area.
