LEVENSEAT

LEVENSEAT

Welcome to Levensseat's 2025 LWVL Launch

A huge thank you for taking part in the exciting new look launch of the Learn with Levensseat school resource!

Your involvement means so much to us, and we truly appreciate your dedication to inspiring young minds about sustainability, waste, and recycling.

There is life after the bin, let us show what happens next!

Lisa Heffernan

Community Engagement Officer

Our Aims & Objectives

Levenseat's aim is to support Learning for Sustainability through engaging with Scottish schools assisting in integrating these crucial subjects into your classroom.

We have created this user-friendly resource, introducing the concepts of waste, recycling and sustainability, reinforces essential messages, and inspires young minds to consider the positive impact they can achieve at school, home and in their communities.

Resources

Levenseat's School resource embraces the clear values, purpose and principles set out by 'A curriculum for Excellence' and the emphasis on the coherent education from ages 3-18.

These relevant recycling and resource awareness activities aim to lay the foundations for future learning as they progress through the education system and provide an enjoyable and educational experience using multi media resources.

Learning for Sustainability is about exploring local and global issues. It's about young people and communities taking action for a better future.

LWL offers a flexible approach to teaching to allow all students with a variety of needs and level of learning to access the resource. You may choose to emphasise certain sections of the materials more than others, depending on your wants and needs of your class. We recommend the following order for delivering the content:

- Waste and Recycling
- Food and Garden Waste
- 3 R's
- People Who Help Us

The Waste Warrior Challenges will be integrated throughout these lessons, allowing you to select which challenges align with your interests and requirements.

We have several other modules to offer to continue your learning about Levensat and the waste management industry. We have focussed on the 4 modules for this launch.

Teacher Notes

The Teachers notes are a step by step informative guide on how to teach and complete each section.

Presentations

The presentations are an introduction to the module with questions and videos to support the learning of Levenseat processes.

Online Resources

Our aim is to have sustainable resources, with access to digital and online content to reduce the amount of paper used. Our online content consist of interactive games and worksheets.

Printable Resources

We understand you may not have access to laptops and computers for every student every day so we have made printable resources that can be completed in absence of a computer. We have worksheets, posters and pictures for displaying.

Waste & Recycling

Our Material Recovery Fuel Preparations facility and Power Plant showcasing the 'dirtiest waste' we receive and how we recover recyclable material and use unrecyclable material to make Energy from Waste

Food & Garden Waste

Our organics facility receives food and garden waste, removes any contaminant material and converts the waste into compost.

People Who Help Us

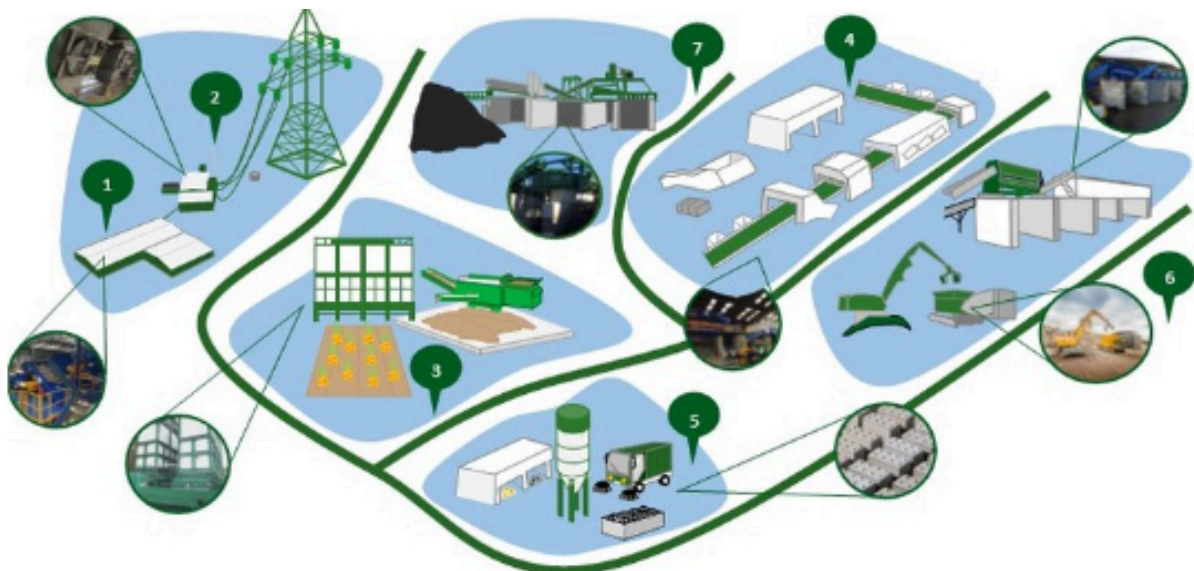

There are many different type of workers here at Levensat that you may not have heard of and know what they do.

3 R's

REDUCE, REUSE and RECYCLE.

The little changes we do to make our school, home and communities are better place.

1. Materials Recycling & Fuel Preparation 2. Power Plant 3. Organics Recycling 4. Container Materials Recycling Facility 5. Concrete production 6. Materials Processing 7. Minerals Recovery Plant
